

Respironics Total™ Face Mask

A totally unique interface solution for noninvasive ventilation and CPAP therapy

A Performance Series™ Mask

The Respironics Total Face Mask is part of the Performance Series™ line which is designed to provide the right mask, the first time and every time.

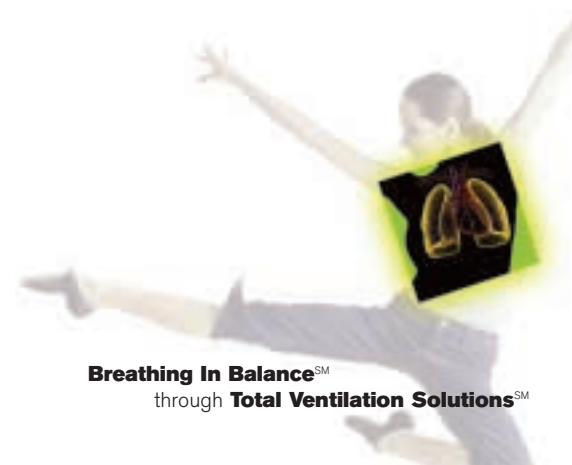

The Total Face Mask is designed for patients in the hospital or home who have difficulty tolerating nasal masks using bi-level or CPAP systems. It provides several benefits:

- Unique alternative for patients who cannot tolerate nasal or full face masks
- Fast, effective seal with no fitting
- Quick release cord enabling fast mask removal
- Ideal for patients in need of immediate ventilation
- One easy-to-use size

Respironics Total™ Face Mask

The Total Face Mask is an interface for adult patients using bi-level or CPAP systems in the hospital or home. It is a comfortable alternative for patients who may not be able to obtain a good seal with a nasal mask, experience skin breakdown, or who are claustrophobic.

Because the Total Face Mask covers the entire face, there are no pressure points around the nose to cause sores or skin breakdown. An effective seal is created around the outside of the face as air pressure from the system inflates the soft, flexible sealing layer. This minimizes leaks while providing optimal airflow through the nasal passages. And, because the air pressure is able to circulate throughout the mask, it allows more natural, comfortable breathing for the patient. Made of clear plastic, the lightweight faceplate adds to the comfort of the Total Face Mask. It does not obstruct the patient's vision, which helps to minimize the feelings of claustrophobia that some patients experience.

The built-in exhalation device can be used in conjunction with disposable circuits to provide an additional method of exhausting CO₂. The Total Face Mask comes in one size with easy-to-use headgear that can be quickly fitted on most patients – an important advantage in critical care situations. Built-in safety features, such as an entrainment valve and quick release cord, give the care provider peace of mind.

Respironics Total Face Mask

comes with comfortable, easy-to-use headgear. Sturdy cloth sidestraps and a mesh crown strap keep the mask evenly and securely in place and help to prevent mask leaks. Adjustable Velcro tabs on the straps attach to hooks on the faceplate of the mask for stable placement.
