Following are details of the materials contained in ResMed Full Face Mask, Nasal Mask and Nasal Pillows systems. Please note some products may not be available in all regions.

As a manufacturer of medical devices, ResMed's products are subject to strict regulation. One of the requirements in this regard is to demonstrate an appropriate level of biocompatibility for every material to which a patient is exposed. To this end, the biocompatibility of each of the materials listed below has been confirmed by ResMed.

ResMed mask cushions are made from silicone which is a hypoallergenic material used in medical appliances and devices. True allergic reactions to silicone are extremely rare. In fact, skin irritation, sores (pressure sores) and blisters are more commonly caused by other associated factors rather than the silicone material itself.

Further information and advice regarding skin irritation resulting from the use of CPAP masks can be found at the following website www.resmed.com, enter 'skin irritation' in the search field to find the latest information.
